

EXP: 2 JAVASCRIPT

2) Write JavaScript to validate the following fields of the Registration page.

- a) First Name (Name should contains alphabets and the length Should not be less than 6 characters).
- b) Password (Password should not be less than 6 characters length).
- c) E-mail id (should not contain any invalid and must follow the standard pattern name@domain.com)
- d) Mobile Number (Phone number should contain 10 digits only).
- e) Last Name and Address (should not be Empty).

AIM:

Develop a registration form with front-end validation that uses JavaScript for input validation and provides real-time feedback on errors.

ALGORITHM:

1. **Create HTML Structure:** Define the form with input fields for first name, last name, email, password, mobile, and address.
2. **Apply Styling:** Use external and internal CSS for layout, colors, and form styling.
3. **Add JavaScript for Validation:** Implement JavaScript to check that each field meets specific requirements (e.g., email format, password length, etc.).
4. **Show Error Messages:** Display error messages next to the respective fields when validation fails.
5. **Submit Form:** Alert the user of successful registration if all fields are valid.

PROGRAM:

Index.html

```
<!DOCTYPE html>  
<html lang="en">
```

```

    }

    if (isValid) {
        alert("Registration Successful!");
    }
}
</script>
</body>
</html>
```

OUTPUT:

The image shows a registration form titled "Register Here" centered on a reddish-brown gradient background. The form is a light gray rounded rectangle containing six white input fields with gray borders, stacked vertically. The labels for the fields are "First Name", "Last Name", "Email", "Password", "Mobile Number", and "Address". At the bottom of the form is a dark red button with the text "Register" in white.

RESULT: The Registration Form was successfully created using HTML, CSS, and JavaScript
